DyLight® 488 Anti-HA tag antibody [16B12]

Anti-HA tag antibody [16B12] conjugated to DyLight® 488 - suitable for flow cytometry, ICC/IF samples. Clone [16B12] is a mouse monoclonal antibody cited in 76 publications.

Key facts

Isotype	IgG1
Host species	Mouse
Conjugation	DyLight® 488
Excitation/Emission	Ex: 493nm, Em: 518nm
Storage buffer	pH: 7.4 Preservative: 0.02% Sodium azide Constituents: 1.6% Sodium phosphate, 1% BSA, 0.88% Sodium chloride
Form	Liquid
Clonality	Monoclonal
Clone number	16B12
Purification technique	Affinity purification Protein G
Concentration	1 mg/mL The concentration of this product may be batch-dependent Batch concentration finder →

Reactivity data

ICC/IF

Tested

Species	Influenza A
Dilution info	1/500 - 1/5000

Notes	-

Flow Cyt

Expected

Species	Influenza A
Dilution info	Use at an assay dependent concentration.
Notes	-

Target data

See full target information HA tag

Storage

Shipped at conditions	Blue Ice
Appropriate short-term storage conditions	+4°C
Appropriate long-term storage conditions	+4°C

Product promise

Tested

We have tested this species and application combination and it works. It is covered by our product promise.

Expected

We have not tested this specific species and application combination in-house, but expect it will work. It is covered by our product promise.

Predicted

This species and application combination has not been tested, but we predict it will work based on strong homology. However, this combination is not covered by our product promise.

Not recommended

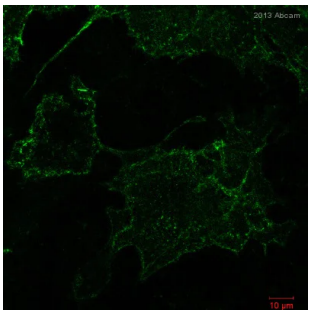

We do not recommend this combination. It is not covered by our product promise.

We are dedicated to supporting your work with high quality reagents and we are here for you every step of the way should you need us.

In the unlikely event of one of our products not working as expected, you are covered by our product promise.

Immunocytochemistry/ Immunofluorescence - DyLight® 488 Anti-HA tag antibody [16B12] (ab117488)

ab117488 staining HA tag in Monkey cos7 cells by ICC/IF (Immunocytochemistry/immunofluorescence). Cells were fixed with formaldehyde. Samples were incubated with primary antibody (1/100) for 1 hour at 22°C.
