ab154805

Anti-Aspartyl Aminopeptidase antibody [EPR10301]

Recombinant | RabMAb

Key facts

Isotype	IgG
Host species	Rabbit
Storage buffer	pH: 7.2 - 7.4 Preservative: 0.01% Sodium azide Constituents: PBS, 40% Glycerol (glycerin, glycerine), 0.05% BSA
Form	Liquid
Clonality	Monoclonal
Immunogen	The exact immunogen used to generate this antibody is proprietary information.
Clone number	EPR10301
Purification technique	Affinity purification Protein A
Concentration	0.119 mg/mL The concentration of this product may be batch-dependent Batch concentration finder →

Reactivity data

WB

Tested

Species	Human
Dilution info	1/1000 - 1/10000
Notes	-

Expected

Species	Mouse, Rat
Dilution info	Use at an assay dependent concentration.
Notes	-

IHC-P

Not recommended

Species	Human, Mouse, Rat
Dilution info	-
Notes	-

ICC/IF

Not recommended

Species	Human, Mouse, Rat
Dilution info	-
Notes	-

Flow Cyt (Intra)

Tested

Species	Human
Dilution info	1/10 - 1/100
Notes	ab172730 - Rabbit monoclonal IgG, is suitable for use as an isotype control with this antibody.

Predicted

Species	Mouse, Rat
Dilution info	-
Notes	-

Target data

See full target information DNPEP

Function	Aminopeptidase with specificity towards an acidic amino acid at the N-terminus. Likely to play an important role in intracellular protein and peptide metabolism.

Storage

Shipped at conditions	Conditional Ambient
Appropriate short-term storage conditions	+4°C
Appropriate long-term storage conditions	-20°C

Notes

Patented technology
Our RabMAb® technology is a patented hybridoma-based technology for making rabbit monoclonal antibodies. For details on our patents, please refer to RabMAb® patents.

What are the advantages of a recombinant monoclonal antibody?
This product is a recombinant monoclonal antibody, which offers several advantages including:

- High batch-to-batch consistency and reproducibility
- Improved sensitivity and specificity
- Long-term security of supply
- Animal-free batch production

For more information, read more on recombinant antibodies.

Supplementary info

This supplementary information is collated from multiple sources and compiled automatically.

Activity summary	Aspartyl Aminopeptidase also known as DNPEP is a metallopeptidase enzyme that mechanically cleaves N-terminal aspartic acid residues from peptides. This enzyme has a molecular mass of about 52 kDa. Aspartyl Aminopeptidase is expressed in various tissues with high abundance in liver and kidney. Its subcellular location is mainly the cytosol where it is involved in protein processing and turnover.
Biological function summary	Aspastyl aminopeptidase plays a role in peptide metabolism by trimming aspartic acid residues aiding in protein degradation and maturation. It functions independently and is not known to be part of a larger protein complex. Its activity facilitates the maintenance of normal peptide levels which is essential for various cellular processes.

Pathways	Aspartyl aminopeptidase is involved in the renin-angiotensin system an important regulator of blood pressure and fluid balance. Within this pathway it modulates levels of angiotensin peptides. It also interacts with other proteins such as angiotensin-converting enzyme (ACE) and neprilysin highlighting its importance in cardiovascular homeostasis.
Associated diseases and disorders	Research links aspartyl aminopeptidase to essential hypertension due to its role in the renin-angiotensin system. Abnormal activity of this enzyme might contribute to alterations in angiotensin metabolism therefore impacting blood pressure regulation. Additionally dysregulation may have implications in kidney diseases where interaction with ACE affects renal function and blood pressure control.

Product promise

Tested

We have tested this species and application combination and it works. It is covered by our product promise.

Expected

We have not tested this specific species and application combination in-house, but expect it will work. It is covered by our product promise.

Predicted

This species and application combination has not been tested, but we predict it will work based on strong homology. However, this combination is not covered by our product promise.

Not recommended

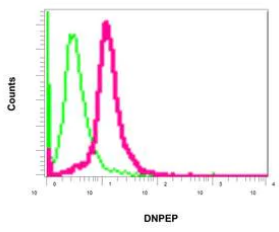

We do not recommend this combination. It is not covered by our product promise.

We are dedicated to supporting your work with high quality reagents and we are here for you every step of the way should you need us.

In the unlikely event of one of our products not working as expected, you are covered by our product promise.

Full details and terms and conditions can be found here:
