abcam

ab169543

Anti-CR1L antibody [EPR9604(B)]

Recombinant | RabMAb

Key facts

Isotype	IgG
Host species	Rabbit
Storage buffer	pH: 7.2 - 7.4 Preservative: 0.01% Sodium azide Constituents: PBS, 40% Glycerol (glycerin, glycerine), 0.05% BSA
Form	Liquid
Clonality	Monoclonal
Immunogen	The exact immunogen used to generate this antibody is proprietary information.
Clone number	EPR9604(B)
Purification technique	Affinity purification Protein A
Concentration	1.505 - 1.54 mg/mL The concentration of this product may be batch-dependent Batch concentration finder →

Reactivity data

WB

Tested

Species	Human
Dilution info	1/1000 - 1/10000
Notes	-

Flow Cyt (Intra)

Tested

Species	Human
Dilution info	1/100 - 1/500
Notes	ab172730 - Rabbit monoclonal IgG, is suitable for use as an isotype control with this antibody.

IP

Not recommended

Species	Human
Dilution info	-
Notes	-

IHC-P

Not recommended

Species	Human
Dilution info	-
Notes	-

ICC/IF

Not recommended

Species	Human
Dilution info	-
Notes	-

Target data

See full target information CR1L

Storage

Shipped at conditions	Conditional Ambient
Appropriate short-term storage duration	1-2 weeks
Appropriate short-term storage conditions	+4°C
Appropriate long-term storage conditions	-20°C
Aliquoting information	Upon delivery aliquot

Notes

Species reactivity
Mouse, Rat: We have preliminary internal testing data to indicate this antibody may not react with these species. Please contact us for more information.

Patented technology
Our RabMAb® technology is a patented hybridoma-based technology for making rabbit monoclonal antibodies. For details on our patents, please refer to RabMAb® patents.

What are the advantages of a recombinant monoclonal antibody?
This product is a recombinant monoclonal antibody, which offers several advantages including:

- High batch-to-batch consistency and reproducibility
- Improved sensitivity and specificity
- Long-term security of supply
- Animal-free batch production

For more information, read more on recombinant antibodies.

Supplementary info

This supplementary information is collated from multiple sources and compiled automatically.

Activity summary	CR1L also known as CR1-like or C3b/C4b receptor 1-like is a protein encoded by the CR1L gene. This protein functions mechanically as a receptor that interacts specifically with complement components C3b and C4b playing roles in immune complex processing. The molecular mass of CR1L is approximately 130 kDa. Expression of CR1L occurs mostly in the liver certain cells of the hematopoietic lineage and in platelets.
Biological function summary	CR1L acts as part of the immune system by binding to complement fragments on opsonized pathogens which facilitates their clearance. It forms part of a receptor complex that clears immune complexes and helps in modulating the complement cascade. CR1L's involvement in complement regulation highlights its contribution to preventing excessive inflammation and protecting host tissues during immune defense.

Pathways	CR1L plays a significant role in the complement activation pathway specifically in classical and alternative pathways. These pathways involve proteins such as factor H and factor I which work alongside CR1L to ensure proper regulation of complement activity. By binding C3b and C4b CR1L helps in the breakdown of these components and assists in maintaining homeostasis by moderating complement activity.
Associated diseases and disorders	CR1L associates with autoimmune conditions such as systemic lupus erythematosus and atypical hemolytic uremic syndrome. These disorders often involve dysregulation of complement activity. CR1L interacts with other complement regulatory proteins such as complement receptor 2 (CR2) in these contexts where imbalances in complement system function can lead to tissue damage and inflammation.

Product promise

Tested

We have tested this species and application combination and it works. It is covered by our product promise.

Expected

We have not tested this specific species and application combination in-house, but expect it will work. It is covered by our product promise.

Predicted

This species and application combination has not been tested, but we predict it will work based on strong homology. However, this combination is not covered by our product promise.

Not recommended

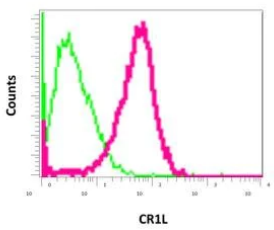

We do not recommend this combination. It is not covered by our product promise.

We are dedicated to supporting your work with high quality reagents and we are here for you every step of the way should you need us.

In the unlikely event of one of our products not working as expected, you are covered by our product promise.

Flow Cytometry (Intracellular) - Anti-CR1L antibody [EPR9604(B)] (ab169543)

CR1L Flow Cytometry (Intracellular) staining using rabbit Anti-CR1L antibody

Intracellular flow cytometric analysis of permeabilized HepG2 cells labeling CR1L with ab169543 at 1/100 dilution (red) compared to a rabbit IgG (negative) (green).

Western blot - Anti-CR1L antibody [EPR9604(B)] (ab169543)

All lanes:
Western blot - Anti-CR1L antibody [EPR9604(B)] (ab169543) at 1/1000 dilution

Lane 1:
HepG2 cell lysate at 10 µg

Lane 2:
Ramos cell lysate at 10 µg

Lane 3:
K562 cell lysate at 10 µg

Lane 4:
MOLT4 cell lysate at 10 µg

Secondary

All lanes:
Goat anti-rabbit HRP at 1/2000 dilution

Predicted band size: 63 kDa
