Alexa Fluor® 647 Anti-TMEM119 antibody [106-6] - Microglial marker

Anti-TMEM119 antibody [106-6] - Alexa Fluor® 647 conjugated (ab225494) is a rabbit recombinant monoclonal antibody detecting TMEM119 in **Flow Cytometry (Intra)**. Suitable for **Human**.

- KO validated for confirmed specificity
- Biophysical QC for unrivalled batch-batch consistency

Recombinant | RabMAb

Key facts

Isotype	IgG
Host species	Rabbit
Conjugation	Alexa Fluor® 647
Excitation/Emission	Ex: 650nm, Em: 665nm
Storage buffer	pH: 7.4 Preservative: 0.02% Sodium azide Constituents: PBS, 30% Glycerol (glycerin, glycerine), 1% BSA
Form	Liquid
Clonality	Monoclonal
Immunogen	The exact immunogen used to generate this antibody is proprietary information.
Clone number	106-6
Purification technique	Affinity purification Protein A
Concentration	0.5 mg/mL The concentration of this product may be batch-dependent Batch concentration finder →

Reactivity data

Flow Cyt (Intra)

Tested

Species	Human
Dilution info	1/500
Notes	**The cellular localisation of this product has been verified in ICC/IF.**

Predicted

Species	Mouse
Dilution info	-
Notes	-

Flow Cyt

Expected

Species	Human, Mouse
Dilution info	Use at an assay dependent concentration.
Notes	-

ICC/IF

Expected

Species	Human
Dilution info	Use at an assay dependent concentration.
Notes	-

Predicted

Species	Mouse
Dilution info	-
Notes	-

Target data

See full target information Tmem119

Function	Plays an important role in bone formation and normal bone mineralization (PubMed:20025746, PubMed:22416756, PubMed:26207632). Promotes the differentiation of myoblasts into osteoblasts (PubMed:20025746, PubMed:22416756, PubMed:22579779). May induce the commitment and differentiation of myoblasts into osteoblasts through an enhancement of BMP2 production and interaction with the BMP-RUNX2 pathway (PubMed:21239498, PubMed:22579779). Up-regulates the expression of ATF4 which plays a central role in osteoblast differentiation (PubMed:24362451). Essential for normal spermatogenesis and late testicular differentiation (PubMed:26207632).

Storage

Shipped at conditions	Blue Ice
Appropriate short-term storage duration	1-2 weeks
Appropriate short-term storage conditions	+4°C
Appropriate long-term storage conditions	-20°C
Aliquoting information	Upon delivery aliquot
Storage information	Avoid freeze / thaw cycle, Stable for 12 months at -20°C, Store in the dark

Notes

What is this antibody validated in?
Alexa Fluor® 647 Anti-TMEM119 antibody [106-6] (ab225494) is a rabbit recombinant monoclonal antibody and is validated for use in Flow Cytometry (Intra), Flow Cytometry (Flow Cyt) in Human samples.

Related products
Antibody clone 106-6 is also available pre-conjugated to a variety of labels for your convenience – Anti-TMEM119 Alexa Fluor® 647 [106-6] (ab225494).

Patented technology
Our RabMAb® technology is a patented hybridoma-based technology for making rabbit monoclonal antibodies. For details on our patents, please refer to RabMAb® patents.

What are the advantages of a recombinant monoclonal antibody?
This product is a recombinant monoclonal antibody, which offers several advantages including:

- High batch-to-batch consistency and reproducibility

- Improved sensitivity and specificity
- Long-term security of supply
- Animal-free batch production

For more information, read more on recombinant antibodies.

Alexa Fluor® is a registered trademark of Molecular Probes, Inc, a Thermo Fisher Scientific Company. The Alexa Fluor® dye included in this product is provided under an intellectual property license from Life Technologies Corporation. As this product contains the Alexa Fluor® dye, the purchase of this product conveys to the buyer the non-transferable right to use the purchased product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). As this product contains the Alexa Fluor® dye the sale of this product is expressly conditioned on the buyer not using the product or its components, or any materials made using the product or its components, in any activity to generate revenue, which may include, but is not limited to use of the product or its components: in manufacturing; (ii) to provide a service, information, or data in return for payment (iii) for therapeutic, diagnostic or prophylactic purposes; or (iv) for resale, regardless of whether they are sold for use in research. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, 5781 Van Allen Way, Carlsbad, CA 92008 USA or outlicensing@thermofisher.com.

Supplementary info

This supplementary information is collated from multiple sources and compiled automatically.

Activity summary	TMEM119 also known as transmembrane protein 119 plays a role in cell membrane dynamics. It has a molecular mass of approximately 35 kDa. TMEM119 is specifically expressed in microglia in the central nervous system. Microglia serve essential functions in brain homeostasis and immune response. Given its expression profile TMEM119 serves as a marker to identify microglia especially in research focused on neurological tissues. Researchers often utilize techniques like microglial flow cytometry and microglial staining for identification and quantification of microglial populations often in frozen marker studies.
Biological function summary	TMEM119 regulates signaling pathways that maintain microglial identity and function but does not typically form part of larger complexes. It modulates microglial activation states and influences responses to central nervous system injury and inflammation. As a membrane protein it may interact with other surface molecules although specific binding partners are not well-characterized in current literature. Researchers value TMEM119 as a reliable marker in studies aiming to distinguish brain-resident microglia from infiltrating peripheral macrophages.
Pathways	TMEM119 functions as a modulator within inflammatory and neuroimmune pathways. It plays roles in the NF-kB signaling and the neuroinflammatory cascade. Its relationship with proteins like CD68 and Iba1 indicates it may influence pathways tied to immune responses and phagocytosis within nervous system contexts. Understanding the interactions and co-expression of TMEM119 with these proteins helps clarify its contribution to neuroimmune functions.
Associated diseases and disorders	TMEM119 links with neurological conditions such as Alzheimer's disease and multiple sclerosis. Altered expression of TMEM119 appears in disease states potentially contributing to pathogenesis through disrupted inflammatory responses. Its association with proteins such as TREM2 in Alzheimer's suggests that TMEM119 may play indirect roles in the progression of neurodegeneration.

Furthermore high TMEM119 levels in pathological samples provide insights into microglial involvement in disease progression and potential targets for therapeutic interventions.

Product promise

Tested

We have tested this species and application combination and it works. It is covered by our product promise.

Expected

We have not tested this specific species and application combination in-house, but expect it will work. It is covered by our product promise.

Predicted

This species and application combination has not been tested, but we predict it will work based on strong homology. However, this combination is not covered by our product promise.

Not recommended

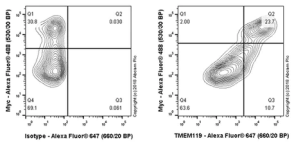

We do not recommend this combination. It is not covered by our product promise.

We are dedicated to supporting your work with high quality reagents and we are here for you every step of the way should you need us.

In the unlikely event of one of our products not working as expected, you are covered by our product promise.

Flow Cytometry (Intracellular) - Alexa Fluor® 647 Anti-TMEM119 antibody [106-6] - Microglial marker (ab225494)

TMEM119 Flow Cytometry (Intracellular) staining using rabbit Anti-TMEM119 antibody

Flow cytometry analysis of HEK-293T (human embryonic kidney) transfected with Myc-His tagged TMEM119 expression vector labelling TMEM119 with ab225494 at 1/500 dilution (right) compared with Rabbit IgG (monoclonal) Alexa Fluor® 647 ab199093 (left). Cells were surface-stained with ab225494, then fixed with 2% PFA for 10 minutes and permeabilised with 0.1% Tween-20 for 30 minutes. Next, they were stained with Alexa Fluor® 488 conjugated Myc-tag. Only Myc-tag (+) population showed TMEM119 positive staining.
