Anti-Plexin A1 antibody [7B8H9]

Mouse Monoclonal Plexin A1 antibody. Suitable for Flow Cyt, WB and reacts with Human samples. Cited in 1 publication. Immunogen corresponding to Recombinant Fragment Protein within Human PLXNA1 aa 1100-1200.

Image updates are in progress. Products remain available and covered by the Abcam Product Promise. Learn more.

Key facts

Isotype	IgG2b
Host species	Mouse
Storage buffer	Preservative: 0.05% Sodium azide Constituents: PBS
Form	Liquid
Clonality	Monoclonal
Immunogen	Recombinant Fragment Protein within Human PLXNA1 aa 1100-1200. The exact immunogen used to generate this antibody is proprietary information. Database link Q9UIW2
Clone number	7B8H9
Purification technique	Affinity purification Protein G
Concentration	1 mg/mL The concentration of this product may be batch-dependent Batch concentration finder →

Reactivity data

Flow Cyt

Tested

Species	Human

Dilution info	1/200 - 1/400
Notes	-

Predicted

Species	Mouse

Target data

See full target information PLXNA1

Function Coreceptor for SEMA3A, SEMA3C, SEMA3F and SEMA6D. Necessary for signaling by class 3 semaphorins and subsequent remodeling of the cytoskeleton. Plays a role in axon guidance, invasive growth and cell migration. Class 3 semaphorins bind to a complex composed of a neuropilin and a plexin. The plexin modulates the affinity of the complex for specific semaphorins, and its cytoplasmic domain is required for the activation of down-stream signaling events in the cytoplasm. Acts as coreceptor of TREM2 for SEMA6D in dendritic cells and is involved in the generation of immune responses and skeletal homeostasis.

Storage

Shipped at conditions Blue Ice

Appropriate short-term storage duration	1-2 weeks
Appropriate short-term storage conditions	+4°C
Appropriate long-term storage conditions	-20°C
Aliquoting information	Upon delivery aliquot
Storage information	Avoid freeze / thaw cycle

Supplementary info

This supplementary information is collated from multiple sources and compiled automatically.

Activity summary	Plexin A1 also known as PLXNA1 is a transmembrane protein that acts as a receptor for semaphorin proteins. It is involved in signaling pathways that guide cell migration and axonal growth. This protein has a molecular mass of around 220 kDa. Plexin A1 is expressed in several tissues including the nervous system where it plays a significant role in neural development. The expression levels can vary depending on the tissue type indicating its diverse functions across different biological contexts.
Biological function summary	Plexin A1 functions in neural patterning and the immune response. It is a part of semaphorin signaling complexes that include neuropilins and other plexins. These complexes are critical in translating extracellular cues into intracellular responses impacting cellular dynamics such as motility and adhesion. Plexin A1 also interacts with various intracellular signaling molecules influencing actin cytoskeleton reorganization which is essential for proper neural development.
Pathways	Plexin A1 participates in semaphorin signaling and cytoskeletal dynamics pathways. It interacts with Sema3A and Sema4D proteins which are key signaling semaphorins. These interactions regulate cellular movement by influencing the activity of downstream effectors like Rho and Rac GTPases. The involvement of Plexin A1 in these pathways is important for processes like axon guidance and neuronal connectivity.
Associated diseases and disorders	Plexin A1 has association with cancer progression and neurodevelopmental disorders. Altered expression levels of Plexin A1 can lead to dysfunction in semaphorin-mediated signaling contributing to conditions such as autism spectrum disorders and tumor metastasis. The protein interacts with Met a receptor tyrosine kinase known to be involved in cancer linking Plexin A1 with oncogenic pathways and providing insights into its role in pathological conditions.

Product promise

Tested

We have tested this species and application combination and it works. It is covered by our product promise.

Expected

We have not tested this specific species and application combination in-house, but expect it will work. It is covered by our product promise.

Predicted

This species and application combination has not been tested, but we predict it will work based on strong homology. However, this combination is not covered by our product promise.

Not recommended

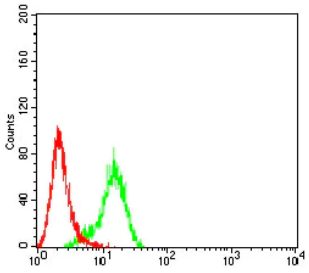

We do not recommend this combination. It is not covered by our product promise.

We are dedicated to supporting your work with high quality reagents and we are here for you every step of the way should you need us.

In the unlikely event of one of our products not working as expected, you are covered by our product promise.
