PE Anti-CD101 antibody [BB27]

Anti-CD101 antibody [BB27] conjugated to PE - suitable for flow cytometry, and reacts with human samples. Clone [BB27] is a mouse monoclonal antibody cited in 19 publications.

Design your panel with our interactive flow cytometry panel builder. Click here.

Key facts

Isotype	IgG1
Host species	Mouse
Conjugation	PE
Excitation/Emission	Ex: 480;565nm, Em: 578nm
Storage buffer	pH: 7.4 Preservative: 0.0975% Sodium azide Constituents: PBS
Form	Liquid
Clonality	Monoclonal
Immunogen	Cell preparation containing CD101 protein. The exact immunogen used to generate this antibody is proprietary information. Database link Q93033
Clone number	BB27
Purification technique	Size-exclusion chromatography

Reactivity data

Flow Cyt

Tested

Species	Human
Dilution info	10 µL for 10^6 Cells

Notes	-

Target data

See full target information CD101

Function	Plays a role as inhibitor of T-cells proliferation induced by CD3. Inhibits expression of IL2RA on activated T-cells and secretion of IL2. Inhibits tyrosine kinases that are required for IL2 production and cellular proliferation. Inhibits phospholipase C-gamma-1/PLCG1 phosphorylation and subsequent CD3-induced changes in intracellular free calcium. Prevents nuclear translocation of nuclear factor of activated T-cell to the nucleus. Plays a role in the inhibition of T-cell proliferation via IL10 secretion by cutaneous dendritic cells. May be a marker of CD4(+) CD56(+) leukemic tumor cells.

Storage

Shipped at conditions	Blue Ice
Appropriate short-term storage conditions	+4°C
Appropriate long-term storage conditions	+4°C
Storage information	Do Not Freeze

Supplementary info

This supplementary information is collated from multiple sources and compiled automatically.

Activity summary	CD101 also known as IGSF2 or V7 is a transmembrane protein that weighs approximately 140 kDa. This protein is part of the immunoglobulin superfamily and is expressed on the surface of certain immune cells including dendritic cells macrophages monocytes and regulatory T cells. Researchers have also detected CD101 on some subsets of B cells. The protein has a significant role in the modulation of immune responses and functions as a marker in immune system studies.
Biological function summary	CD101 influences the immune response through its regulatory effects on cell signaling and interaction. The protein's function often centers within a complex environment contributing to the inhibitory signaling pathways that help balance immune activation. Its presence on regulatory T cells suggests a role in suppressing overactive immune responses which is important to maintaining immune homeostasis. Researchers associate CD101 expression with the control of inflammatory processes highlighting its functional significance.

Pathways	Research shows that CD101 participates in pathways key to immune regulation such as the T-cell receptor signaling pathway. This involvement connects CD101 with proteins like CD3 and CD4 emphasizing its role in modulating T-cell response. The protein plays a part in downstream signaling events that fine-tune immune responses by dampening excessive activation therefore helping prevent autoimmune reactions. It ensures the immune system effectively targets pathogens without harming host tissues.
Associated diseases and disorders	Studies correlate CD101 expression with autoimmune diseases and inflammatory diseases including inflammatory bowel disease (IBD). These associations suggest a potential protective role of CD101 in managing chronic inflammation. Scientists have also observed interactions with proteins like TNF-alpha in these contexts reflecting the complex interplay CD101 has with pro-inflammatory cytokines. Understanding CD101's involvement in disease processes can aid in developing therapeutic strategies that aim to modulate immune responses effectively.

Product promise

Tested

We have tested this species and application combination and it works. It is covered by our product promise.

Expected

We have not tested this specific species and application combination in-house, but expect it will work. It is covered by our product promise.

Predicted

This species and application combination has not been tested, but we predict it will work based on strong homology. However, this combination is not covered by our product promise.

Not recommended

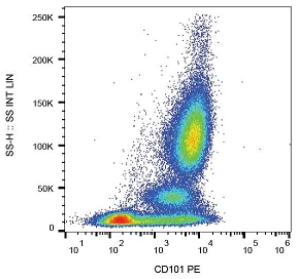

We do not recommend this combination. It is not covered by our product promise.

We are dedicated to supporting your work with high quality reagents and we are here for you every step of the way should you need us.

In the unlikely event of one of our products not working as expected, you are covered by our product promise.

Flow Cytometry - PE Anti-CD101 antibody [BB27] (ab234248)

CD101 Flow Cytometry staining using mouse Anti-CD101 antibody

Flow cytometric analysis of human peripheral blood cells labeling CD101 using ab234248. Surface staining, gated on leukocytes.

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
