ab248996

Anti-Spermine synthase antibody [EPR9253] - BSA and Azide free

Recombinant | RabMAb | KO Validated

Key facts

Isotype	IgG
Host species	Rabbit
Storage buffer	pH: 7.2 - 7.4 Constituents: PBS
Form	Liquid
Clonality	Monoclonal
Immunogen	The exact immunogen used to generate this antibody is proprietary information.
Carrier free	Yes
Clone number	EPR9253
Purification technique	Affinity purification
Concentration	1.007 mg/mL The concentration of this product may be batch-dependent Batch concentration finder →

Reactivity data

ICC/IF

Not recommended

Species	Mouse, Human, Rat
Dilution info	-

Notes	-

IP

Not recommended

Species	Mouse, Human, Rat
Dilution info	-
Notes	-

WB

Tested

Species	Human
Dilution info	-
Notes	-

Expected

Species	Mouse, Rat
Dilution info	Use at an assay dependent concentration.
Notes	-

IHC-P

Not recommended

Species	Mouse, Human, Rat
Dilution info	-
Notes	-

Flow Cyt (Intra)

Tested

Species	Human
Dilution info	-

Notes	-

Expected

Species	Mouse
Dilution info	Use at an assay dependent concentration.
Notes	-

Predicted

Species	Rat
Dilution info	-
Notes	-

Target data

See full target information Spermine synthase

Function	Catalyzes the production of spermine from spermidine and decarboxylated S-adenosylmethionine (dcSAM).

Storage

Shipped at conditions	Blue Ice
Appropriate short-term storage conditions	+4°C
Appropriate long-term storage conditions	+4°C
Storage information	Do Not Freeze

Notes

ab248996 is the carrier-free version of ab151547.

Patented technology

Our RabMAb® technology is a patented hybridoma-based technology for making rabbit monoclonal antibodies. For details on our patents, please refer to RabMAb® patents.

What are the advantages of a recombinant monoclonal antibody?
This product is a recombinant monoclonal antibody, which offers several advantages including:

- High batch-to-batch consistency and reproducibility
- Improved sensitivity and specificity
- Long-term security of supply
- Animal-free batch production

For more information, read more on recombinant antibodies.

Conjugation ready
Our carrier-free antibodies are typically supplied in a PBS-only formulation, purified and free of BSA, sodium azide and glycerol. This conjugation-ready format is designed for use with fluorochromes, metal isotopes, oligonucleotides, and enzymes, which makes them ideal for antibody labelling, functional and cell-based assays, flow-based assays (e.g. mass cytometry) and Multiplex Imaging applications.

Use our conjugation kits for antibody conjugates that are ready-to-use in as little as 20 minutes with 1 minute hands-on-time and 100% antibody recovery: available for fluorescent dyes, HRP, biotin and gold.

Compatibility
This product is compatible with the Maxpar® Antibody Labeling Kit from Fluidigm, without the need for antibody preparation. Maxpar® is a trademark of Fluidigm Canada Inc.

Supplementary info

This supplementary information is collated from multiple sources and compiled automatically.

Activity summary	Spermine synthase also recognized as SMS is an enzyme that catalyzes the conversion of spermidine to spermine. Mechanically it transfers an aminopropyl group from decarboxylated S-adenosylmethionine to spermidine resulting in spermine. This enzyme is around 43 kDa in size and is ubiquitously expressed in various tissues with notable expression in the liver and kidney. It plays an essential role in the polyamine biosynthetic pathway contributing to cellular growth and differentiation.
Biological function summary	The enzyme fosters cellular functions by modulating spermine levels which are necessary for stabilizing DNA RNA and ribosome structures. It does not exist as part of a larger complex but works closely with other enzymes in the polyamine synthesis process. Spermine contributes to cellular homeostasis influencing ion channel activity and defending against oxidative stress. The balanced production of spermine by spermine synthase represents its importance in maintaining normal cellular physiology.
Pathways	Spermine synthase plays an important role in the polyamine metabolic pathway converting spermidine to spermine finalizing the chain of polyamine biosynthesis. It interacts closely with enzymes like ornithine decarboxylase which facilitates the initial steps of polyamine synthesis and spermidine synthase which precedes spermine formation. The pathway is fundamental to cell proliferation apoptosis and differentiation processes emphasizing the enzyme's pivotal part in cell biology.
Associated diseases and disorders	Alterations in spermine synthase activity associate with Snyder-Robinson syndrome and cancer. Snyder-Robinson syndrome connected to mutations in the

SMS gene results in neurodevelopmental difficulties and skeletal abnormalities. In cancer dysregulation of polyamine synthesis where spermine synthase is implicated contributes to uncontrolled cellular proliferation. Changes in spermine levels impact other proteins including ornithine decarboxylase and other polyamine pathway enzymes which participate in disease progression.

Product promise

Tested

We have tested this species and application combination and it works. It is covered by our product promise.

Expected

We have not tested this specific species and application combination in-house, but expect it will work. It is covered by our product promise.

Predicted

This species and application combination has not been tested, but we predict it will work based on strong homology. However, this combination is not covered by our product promise.

Not recommended

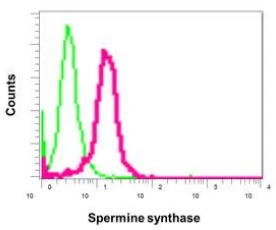

We do not recommend this combination. It is not covered by our product promise.

We are dedicated to supporting your work with high quality reagents and we are here for you every step of the way should you need us.

In the unlikely event of one of our products not working as expected, you are covered by our product promise.

Flow Cytometry (Intracellular) - Anti-Spermine synthase antibody [EPR9253] - BSA and Azide free (ab248996)

Spermine synthase Flow Cytometry (Intracellular) staining using rabbit Anti-Spermine synthase antibody

This data was developed using ab151547, the same antibody clone in a different buffer formulation.
Intracellular flow cytometric analysis of permeabilized HeLa cells labeling Spermine synthase (red) with ab151547 at 1/10 dilution, compared to a nonspecific control antibody (green).

Western blot - Anti-Spermine synthase antibody [EPR9253] - BSA and Azide free (ab248996)

Spermine synthase Western blot staining using rabbit Anti-Spermine synthase antibody

This data was developed using ab151547, the same antibody clone in a different buffer formulation.
All lanes:
Western blot - Anti-Spermine synthase antibody [EPR9253] (ab151547) at 1/1000 dilution

Lane 1:
Human fetal heart lysate at 10 µg

Lane 2:
HeLa lysate at 10 µg

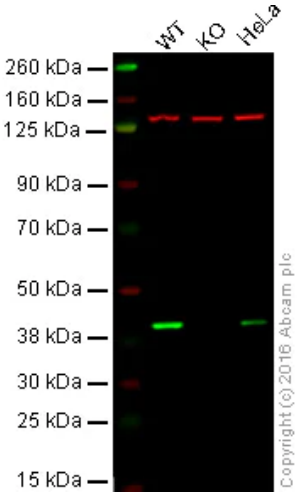

Lane 3:
Jurkat lysate at 10 µg

Lane 4:
K562 lysate at 10 µg

Secondary

All lanes:
Goat anti-rabbit HRP at 1/2000 dilution

Predicted band size: 41 kDa

Western blot - Anti-Spermine synthase antibody [EPR9253] - BSA and Azide free (ab248996)

Spermine synthase Western blot staining using rabbit Anti-Spermine synthase antibody

This data was developed using ab151547, the same antibody clone in a different buffer formulation.
Lane 1 Wild-type HAP1 cell lysate (20 µg)

Lane 2 Spermine synthase knockout HAP1 cell lysate (20 µg)

Lane 3 HeLa cell lysate (20 µg)

Lanes 1 - 3 Merged signal (red and green). Green - ab151547 observed at 40 kDa. Red - loading control, ab18058, observed at 124 kDa.

ab151547 was shown to specifically react with Spermine synthase when Spermine synthase knockout samples were used. Wild-type and Spermine synthase knockout samples were subjected to SDS-PAGE. ab151547 and ab18058 (loading control to vinculin) were both diluted 1/1000 and incubated overnight at 4°C. Blots were developed with Goat anti-Rabbit IgG H&L (IRDye® 800CW) preadsorbed ab216773 and Goat anti-Mouse IgG H&L (IRDye® 680RD) preadsorbed ab216776 secondary antibodies at 1/10000 dilution for 1 hour at room temperature before imaging.

All lanes:
Western blot - Anti-Spermine synthase antibody [EPR9253] (ab151547)

Predicted band size: 41 kDa
