Alexa Fluor® 488 Anti-HHLA2 antibody [EPR23563-120]

Recombinant | RabMAb

Key facts

Isotype	IgG
Host species	Rabbit
Conjugation	Alexa Fluor® 488
Excitation/Emission	Ex: 495nm, Em: 519nm
Storage buffer	pH: 7.4 Preservative: 0.02% Sodium azide Constituents: PBS, 30% Glycerol (glycerin, glycerine), 1% BSA
Form	Liquid
Clonality	Monoclonal
Immunogen	The exact immunogen used to generate this antibody is proprietary information.
Clone number	EPR23563-120
Purification technique	Affinity purification Protein A
Concentration	0.5 mg/mL The concentration of this product may be batch-dependent Batch concentration finder →

Reactivity data

Flow Cyt

Tested

Species	Human
Dilution info	1/50
Notes	-

Target data

See full target information HHLA2

Function	Through interaction with TMIGD2, costimulates T-cells in the context of TCR-mediated activation. Enhances T-cell proliferation and cytokine production via an AKT-dependent signaling cascade.

Storage

Shipped at conditions	Blue Ice
Appropriate short-term storage duration	1-2 weeks
Appropriate short-term storage conditions	+4°C
Appropriate long-term storage conditions	-20°C
Aliquoting information	Upon delivery aliquot
Storage information	Avoid freeze / thaw cycle, Store in the dark

Notes

Patented technology
Our RabMAb® technology is a patented hybridoma-based technology for making rabbit monoclonal antibodies. For details on our patents, please refer to RabMAb® patents.

What are the advantages of a recombinant monoclonal antibody?
This product is a recombinant monoclonal antibody, which offers several advantages including:

- High batch-to-batch consistency and reproducibility
- Improved sensitivity and specificity
- Long-term security of supply
- Animal-free batch production

For more information, read more on recombinant antibodies.

Alexa Fluor® is a registered trademark of Molecular Probes, Inc, a Thermo Fisher Scientific Company. The Alexa Fluor® dye included in this product is provided under an intellectual property license from Life Technologies Corporation. As this product contains the Alexa Fluor® dye, the purchase of this product conveys to the buyer the non-transferable right to use the purchased product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). As this product contains the Alexa Fluor® dye the sale of this product is expressly conditioned on the buyer not using the product or its components, or any materials made using the product or its components, in any activity to generate revenue, which may include, but is not limited to use of the product or its components: in manufacturing; (ii) to provide a service, information, or data in return for payment (iii) for therapeutic, diagnostic or prophylactic purposes; or (iv) for resale, regardless of whether they are sold for use in research. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, 5781 Van Allen Way, Carlsbad, CA 92008 USA or outlicensing@thermofisher.com.

Supplementary info

This supplementary information is collated from multiple sources and compiled automatically.

Activity summary	The HHLA2 protein also known as Human endogenous retrovirus-H Long Terminal Repeat-Associating 2 plays a role in the immune response. This protein is part of the B7 family which are known for their involvement in immunomodulation. It has a molecular weight of approximately 30 kDa. HHLA2 is expressed in various tissues including the placenta kidneys intestines and lungs. Additionally HHLA2 is typically upregulated in some cancer tissues which suggests a potential role in tumor immunity.
Biological function summary	HHLA2 acts as a co-inhibitory molecule that modulates T cell activity functioning to suppress T cell proliferation and cytokine production. It engages in the immune checkpoint pathways which are critical for maintaining immune tolerance and preventing over-activation of the immune system. HHLA2 does not act alone but rather interacts with other B7 family proteins in these pathways. It influences CTLA-4 and PD-1 mediated pathways by modulating the immune checkpoints adjusting the immune response based on physiological needs.
Pathways	HHLA2 fits into the immune checkpoint regulation pathways. It is known to modulate the PD-1/PD-L1 pathway which is essential for T cell immune evasion in cancer cells. Through its interactions HHLA2 can impact the tumor microenvironment by influencing immune cell infiltration and activation which is a significant aspect of cancer progression and immune evasion strategies. It is also related to CTLA-4 regulatory pathways which play an important role in maintaining immune homeostasis by negatively regulating T cell activation.
Associated diseases and disorders	HHLA2 associates with cancer particularly certain solid tumors where its expression is increased suggesting its role in immune evasion. This association points to its potential as a therapeutic target for immunotherapy. HHLA2 is connected to proteins like PD-L1 and CTLA-4 which are already known targets in cancer therapy because of their roles in bypassing immune detection by tumors. Additionally its expression is linked to autoimmune diseases where dysregulation of immune checkpoints results in excessive immune cell activity against self-tissues.

Product promise

Tested

We have tested this species and application combination and it works. It is covered by our product promise.

Expected

We have not tested this specific species and application combination in-house, but expect it will work. It is covered by our product promise.

Predicted

This species and application combination has not been tested, but we predict it will work based on strong homology. However, this combination is not covered by our product promise.

Not recommended

We do not recommend this combination. It is not covered by our product promise.

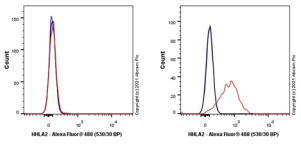

We are dedicated to supporting your work with high quality reagents and we are here for you every step of the way should you need us.

In the unlikely event of one of our products not working as expected, you are covered by our product promise.

Full details and terms and conditions can be found here:
Terms & Conditions.

Flow Cytometry - Alexa Fluor® 488 Anti-HHLA2 antibody [EPR23563-120] (ab283698)

HHLA2 Flow Cytometry staining using rabbit Anti-HHLA2 antibody

Flow cytometric analysis of HeLa (human cervix adenocarcinoma epithelial cell line) (left), A-204 (human muscle rhabdomyosarcoma cell line) (right) cells labelling HHLA2 with ab283698 at 1/50 dilution (1µg) (Red) compared with a Rabbit monoclonal isotype control - Alexa Fluor®488 (Black) isotype control and an unlabelled control (cells without incubation with primary antibody and secondary antibody) (Blue). Negative control: Hela (PMID:23716685). Gated on viable cells.

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
