Alexa Fluor® 647 Anti-ULBP2 antibody [EPR26171-156]

Recombinant | RabMAb

Key facts

Isotype	IgG
Host species	Rabbit
Conjugation	Alexa Fluor® 647
Excitation/Emission	Ex: 650nm, Em: 665nm
Storage buffer	pH: 7.4 Preservative: 0.02% Sodium azide Constituents: PBS, 30% Glycerol (glycerin, glycerine), 1% BSA
Form	Liquid
Clonality	Monoclonal
Immunogen	The exact immunogen used to generate this antibody is proprietary information.
Clone number	EPR26171-156
Purification technique	Affinity purification Protein A
Concentration	0.5 mg/mL The concentration of this product may be batch-dependent Batch concentration finder →

Reactivity data

Flow Cyt

Tested

Species	Human
Dilution info	1/500
Notes	-

Flow Cyt (Intra)

Expected

Species	Human
Dilution info	Use at an assay dependent concentration.
Notes	-

Target data

See full target information ULBP2

Function	Binds and activates the KLRK1/NKG2D receptor, mediating natural killer cell cytotoxicity.

Storage

Shipped at conditions	Blue Ice
Appropriate short-term storage duration	1-2 weeks
Appropriate short-term storage conditions	+4°C
Appropriate long-term storage conditions	-20°C
Aliquoting information	Upon delivery aliquot
Storage information	Avoid freeze / thaw cycle, Store in the dark

Notes

Patented technology
Our RabMAb® technology is a patented hybridoma-based technology for making rabbit monoclonal antibodies. For details on our patents, please refer to RabMAb® patents.

What are the advantages of a recombinant monoclonal antibody?
This product is a recombinant monoclonal antibody, which offers several advantages including:

- High batch-to-batch consistency and reproducibility
- Improved sensitivity and specificity
- Long-term security of supply
- Animal-free batch production

For more information, read more on recombinant antibodies.

Alexa Fluor® is a registered trademark of Molecular Probes, Inc, a Thermo Fisher Scientific Company. The Alexa Fluor® dye included in this product is provided under an intellectual property license from Life Technologies Corporation. As this product contains the Alexa Fluor® dye, the purchase of this product conveys to the buyer the non-transferable right to use the purchased product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). As this product contains the Alexa Fluor® dye the sale of this product is expressly conditioned on the buyer not using the product or its components, or any materials made using the product or its components, in any activity to generate revenue, which may include, but is not limited to use of the product or its components: in manufacturing; (ii) to provide a service, information, or data in return for payment (iii) for therapeutic, diagnostic or prophylactic purposes; or (iv) for resale, regardless of whether they are sold for use in research. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, 5781 Van Allen Way, Carlsbad, CA 92008 USA or outlicensing@thermofisher.com.

Supplementary info

This supplementary information is collated from multiple sources and compiled automatically.

Activity summary	ULBP2 also known as UL16-binding protein 2 and N2DL2 is a glycoprotein with a mass of approximately 30 kDa. It belongs to the family of NKG2D ligands and plays an essential role in the immune response. This protein is expressed on the surface of a variety of cells including epithelial cells fibroblasts and activated immune cells. Its expression can be induced by cellular stress infection or transformation making it an important player in the regulation of the immune system.
Biological function summary	The function of ULBP2 is to facilitate the activation of natural killer (NK) cells and cytotoxic T lymphocytes through binding to the NKG2D receptor. ULBP2 is not a part of a complex but acts independently to trigger immune responses. By interacting with NKG2D ULBP2 promotes the release of cytokines and enhances the cytolytic activity of these immune cells leading to the destruction of infected or transformed cells. This mechanism allows the immune system to efficiently target and eliminate compromised cells.
Pathways	The interaction between ULBP2 and the NKG2D receptor forms a critical part of the immune surveillance pathway. This pathway detects and responds to cellular abnormalities such as tumorigenesis or viral infections. ULBP2's activity relates closely with other NKG2D ligands and components of the immune checkpoint pathways notably involving proteins like MICA and MICB. Additionally ULBP2’s interaction impacts the balance between activating and inhibitory signals within the NK cell cascade thereby influencing immune system homeostasis.
Associated diseases and disorders	ULBP2 expression has significant implications in cancer and autoimmune conditions. Elevated levels of ULBP2 are frequently associated with various types

of cancer where they can either stimulate anti-tumor immunity or be shed to evade immune detection. In this context the protein interacts with NKG2D which is also expressed on tumor-infiltrating lymphocytes. Additionally altered expression of ULBP2 has been observed in inflammatory disorders potentially contributing to tissue damage due to sustained immune activation. Understanding these interactions is important for developing therapeutic strategies targeting ULBP2-related pathways.

Product promise

Tested

We have tested this species and application combination and it works. It is covered by our product promise.

Expected

We have not tested this specific species and application combination in-house, but expect it will work. It is covered by our product promise.

Predicted

This species and application combination has not been tested, but we predict it will work based on strong homology. However, this combination is not covered by our product promise.

Not recommended

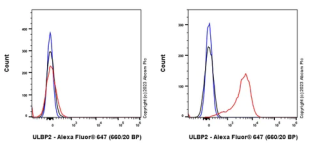

We do not recommend this combination. It is not covered by our product promise.

We are dedicated to supporting your work with high quality reagents and we are here for you every step of the way should you need us.

In the unlikely event of one of our products not working as expected, you are covered by our product promise.

Full details and terms and conditions can be found here:
Terms & Conditions.

Flow Cytometry - Alexa Fluor® 647 Anti-ULBP2 antibody [EPR26171-156] (ab313732)

Flow cytometric analysis of Raji (human Burkitt's lymphoma B lymphocyte, Left) / BxPC-3 (human pancreas adenocarcinoma epithelial cell, Right) cells labelling ULBP2 with ab313732 at 1/500 dilution (0.1 ug)/Red compared with a Rabbit IgG monoclonal [EPR25A] - Isotype Control (Alexa Fluor® 647) (ab199093) (Black) isotype control and an unlabelled control (cells without incubation with primary antibody and secondary antibody) (Blue). Low expression: Raji (PMID: 22613008).

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
