

Product datasheet

Protease Inhibitor Cocktail ab271308

Overview

Product name

Protease Inhibitor Cocktail

Product overview

Protease Inhibitor Cocktail ([ab271306](#)) protects protein extracts from aminopeptidases, metalloproteases, and serine, cysteine, and aspartic acid proteases. It is supplied as a 100X stock solution of protease inhibitors dissolved in DMSO and a 100X stock solution of EDTA dissolved in water, pH 8.0. Ab271306 is a general-purpose reagent suitable for protease inhibition during protein extraction from mammalian tissues and cells, yeast and fungal cells, and bacteria.

Ab271306 contains the chelating agent EDTA for improved protection against metalloproteases. It should therefore not be added to samples intended for subsequent analysis by techniques that are incompatible with EDTA, such as isoelectric focusing and metal affinity column separations. For these applications, use Protease Inhibitor Cocktail EDTA Free ([ab270055](#)).

This product is manufactured by Expedeon, an Abcam company. It was previously called Proteoloc™ Protease Inhibitor Cocktail. Expedeon product code 44204 is the same as the 10 mL size of this product.

Composition:

AEBSF: Irreversible serine protease inhibitor. Inhibits chymotrypsin, kallikrein, plasmin, thrombin, and trypsin.

Aprotinin: Reversible serine protease inhibitor. Inhibits chymotrypsin, kallikrein, plasmin, trypsinogen, and urokinase.

Bestatin: Metalloprotease inhibitor selective for aminopeptidases. Inhibits activity of leucine aminopeptidase, aminopeptidase B, and triamino peptidase.

EDTA: Inhibits metalloproteases by chelating divalent metal ions (provided in a separate vial).

E-64: Irreversible inhibitor of cystine proteases. Inhibits calpain, papain, and cathepsin B.

Leupeptin: Reversible inhibitor of serine and cystine proteases. Inhibits calpain, papain, trypsin, and cathepsin B.

Pepstatin A: Reversible aspartic acid protease inhibitor. Inhibits pepsin, rennin, cathepsin D, chymosin, and protease B.

Recommended procedure:

Allow product to thaw at room temperature. Agitate or vortex container to ensure uniform solution. Ab271306 is provided as a 100X stock solution of protease inhibitors and a 100X stock solution of EDTA. Dilute product into desired lysis buffer to obtain a 1X concentration (5 mM). For example, dilute 100 µL protease inhibitors and 100 µL EDTA into 10 mL Protein Extraction Kit ([ab270054](#)). Proceed in accordance with extraction kit or lysis buffer protocol.

Properties

Storage instructions Store at -20°C. Please refer to protocols.

Components	
Protease Inhibitor Cocktail	1 x 1ml
EDTA	1 x 1ml

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit <https://www.abcam.com/abpromise> or contact our technical team.

Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
